

Aesthetic and morphological recovery in the posterior tooth

DR. GIORGIO ATZERI
private dental practice in Olbia

The versatility of the Asteria composite that due to its high degree of integration and camouflage effect, allows to mask discolorations and high aesthetic results can be achieved even in the posterior teeth.

1 Large II nd Class cavity in 1.6 tooth. The first molar present a secondary caries.

2 Tooth preparation, note the dyschromia at the bottom cavity.

3 Restorations with Estelite Asteria, note that is not apparent the dyschromia view in the preceding slide.

4 Final result with a excellent integration.

5 Easy to realize the anatomical surfaces, good handling.
